

No 3973

Place New York City, New York.

Building Riverside Church, 122nd Street and Riverside Drive.

Date of Completion

Persons Interested Mr. George Smith, Business Manager Price:

Dr. Robert J. McCreehan, in charge; Dr. J. Gordon Chamberlin, Mr. Jesse Lyons.
Minister Denomination

Architect Collins, Willis and Beckner, Boston.

Vents

Position in Church Worship Room, Fourth Floor.

Height from floor Protection Glass Groove Rabbet Metal Stone Wood

Exposure Get bright sun. Footage

Inscription

Design wanted Staging

Templates Blueprints

General Information About all the windows through the building are being provided with metal mesh, many divided in sections with thermo panes, and we must study the plans very carefully to be sure our design does not conflict with these bars. The Architect thinks the leaded glass will have to be set in separate metal frames, machine screwed to the inside of the main frames. In some cases there are ventilators, and the leaded glass will have to move with the frames there also. The idea is to keep a uniform appearance to all the windows from the outside. Some of the windows, probably including the Meditation Chapel windows, will be illuminated from the outside for night effect inside. Willis thinks diffusing glass should be used on the outside to help make the artificial illumination more even.

Here again would be what Willis calls "simple grisalle", - no view thru, (we should get plans of these various groups of windows from the Architect and study them with Willis,) but means just glass without the foliated pattern - just light tints without the foliated pattern.

These windows get a bright sun, and they think they may have drapes for use at certain time.
